Dietary supplements are also an excellent way to obtain vitamin D. Small amounts of nutrients are present in the liver of beef, cheese, egg yolks and fungi. It is suggested that getting about 15 minutes of sun exposure between 10 a.m. and 3 p.m. at least twice a week on your face, arms, legs, or back can help your body synthesize enough vitamin D. This deficiency can result in healthy conditions, two of which are called rickets and osteomalacia. Fish liver oils are another good source of vitamin D. There is evidence that vitamin D3 increases and maintains overall levels slightly better than vitamin D2. Side effects of a vitamin D deficiencyA vitamin D deficiency occurs when you don't properly absorb the nutrient or when the enzymes can't convert the nutrient to its active form. Photo CortesÃ¡ Alexander Spatari/Moment/Getty Images Only foods fortified with vitamin D include whole milk, orange juice, margarine and breakfast cereals. In addition, this nutrient increases your immune system³ reduces inflammation³ inside your body, potentially avoiding future more serious conditions in the process. It appears that vitamin D deficiency is related to the development of MS, and people with MS and higher levels of vitamin D appear to have reduced disease activity. It also plays a vital role in cell growth, neuromuscular functions, and protein coding. If left unaddressed, vitamin D intoxication can lead³ anorexia, excessive calcification³ the bones and³ internal organs, kidney stones and hypertension³ (high blood pressure³). It is unlikely to³ as a result of normal dietary intake and exposure³ the sun. Daily dose recommendationsRecommended dietary allowances for dietary intake D vary depending on your age and other health and life circumstances, such as pregnancy. The best sources of natural vitamin D are fatty fish such as salmon, tuna, cod, sardines and mackerel. Photo courtesy: Justin Paget / DigitalVision / Getty Images Vitamin D is important to maintain a healthy body, mainly because it helps it to completely maximize the absorption and use of calcium from your body, an important mineral that we all need. A % 1 Block UV rays and can hinder ability to your body to create vitamin D. Photo courtesy: Katleho Seisa / E + / Getty Images If you have a preexisting medical condition or other concerns, it's better to talk with a Health Professional to determine your recommended diet for vitamin D. Osteomalacia, characterized by soft and weak bones, is usually present in adults. In this way, you can be sure that vitamin does not adversely interact with your condition or medication. It is also known that UV rays trigger free radicals, which can cause skin cancer if they are not controlled. If the climate in which you live is mainly murky, it's above obtain the recommended amount of vitamin D by other means. But that is not all that it is. Vitamin D vitamin D is naturally found in certain foods and now appears in many more foods that have been fortified with added nutrients. However, it is difficult to measure exactly how much exposure to the sun can generate enough vitamin D, since overexposure can also be harmful. Supplements come in two forms: vitamin D3 (cholecalciferol), which is idle to the form that your body produces when exposed to sunlight, and vitamin D2 (ergocalciferol), which differs slightly from D3 in its chemical structure of side chain structure.
